

How to push your notebook by git

1. Sign up for your GitHub account.
2. Open terminal and type this.(with your git name and git email account)

```
(base) mengxiangyong@MENGdeMacBook-Pro ~ % git config --global user.name "xaggnl3"
(base) mengxiangyong@MENGdeMacBook-Pro ~ % git config --global user.email "xiangyong.meng@edu.em-lyon.com"
```

3. Go to this link: https://github.com/xaggnl3/icp_project

4. And click the 'Fork' here. You will give a new page. And then copy that link.
(it will be like [https://github.com/\(your github account\)/ icp_project](https://github.com/(your github account)/ icp_project))
5. And that open the terminal and run the queries below
6. `git clone https://github.com/(your github account)/ icp_project`. (after that you will have a folder)
7. `git pull origin master`
8. `cd icp_project /`
9. `git branch your_name`
10. `git checkout your_name`
11. `git add .`(means push all the file in this folder to git)
12. `git commit -m "The commit message you want to write"`
13. `git push origin your_name`
